Matchmaking Event 2013

Czech-Norwegian Research Programme

Biotechnical measures to increase the forest roads load - using wooden material

Petr Hruza, Jitka Fialová

**Mendel
University
in Brno**

Petr.hruza@mendelu.cz
Jitka.fialova@mendelu.cz

The aim

- verify the possibility of using a timber (in this case wooden chips) to improve the resistance of forest roads in practice

- We are trying to find the partner who would like to test this method in the different conditions in the Norway

Budget

- Will be calculated after the bilateral negotiation/agreement
 - Personal cost
 - Travel cost
 - Cost of the new equipment

Interdisciplinary focus

- Environment – sustainable material used in the countryside
- Social sciences – material used for the different trails and tracks for tourism
